

# Eyeson Watchit v3.0

2 or 4-camera video surveillance software for Windows™

Watchit is the entry-level member of the Eyeson® product family. Based on the same software architecture used in Eyeson Technologies, Inc.'s industry-leading Eyeson Servers, Watchit converts any existing PC into a commercial grade local and remote video surveillance system. Watchit makes all major features of commercial Eyeson servers available on a home or office computer by simply installing software—no capture cards required!

Watchit is ideal for home automation and small business video surveillance applications requiring up to four cameras. Watchit is a preferred solution over standalone DVRs because it is a software only implementation and does not require the end customer to install an additional hardware device.

## Product Features

- > Windows™ 2000 and XP Pro compatible software
